

NitroXtreme Q&A

Q: What is the difference between NitroFX and NitroXtreme?

A: NitroFX is a leading Noni plant based product that has been shown to promote Nitric Oxide production in the body. NitroFX will continue to produce the amazing results it always has. It will remain a core product in the Kyäni lineup.

NitroXtreme was developed from the research and successful results generated from NitroFX. It contains higher Nitrates, plus CoQ10, Magnesium, Zinc, Chromium, and Niacin. These added ingredients increase the production of Nitric Oxide and help the body use it.

Q: What are the benefits of the added ingredients in NitroXtreme?

A:

CoQ10

- A natural, fat-soluble nutrient present in virtually every cell in the body
- Vital to the production of Adenosine Triphosphate (ATP) which is 90% of the energy in the body
- Promotes cardiovascular health and improved blood flow
- Aides in strengthening the immune system and promoting good periodontal health

Magnesium

- Converts carbohydrates, protein and fats to energy
- Supports muscle relaxation and contraction as well as nerve transmission
- Promotes healthy systolic and diastolic blood pressure
- Promotes healthy glucose metabolism

Zinc

- A component of numerous enzymes including the enzyme that converts L-arginine into Nitric Oxide
- Plays a role in protein synthesis, blood sugar balance, wound healing and brain function
- Promotes healthy skin, and a strong immune system
- Promotes healthy fetal and reproductive health
- Promotes healthy prostate function

Chromium

- Assists uptake of blood sugar into the cells
- Promotes regulation of blood sugar levels
- Reduces the risk of insulin resistance
- Supports lean body mass

Niacin (Vitamin B3)

- Plays important role in release of energy from carbohydrates
- Aids in breakdown of protein and fats
- Promotes healthy LDL cholesterol levels
- Essential for healthy nervous system
- Supports proper function of intestines
- Helps hormone production

Q: How should I take NitroXtreme?

A: NitroXtreme should be taken orally. Letting the product sit under the tongue promotes quick absorption into the body. When initially taking the product, it is recommended that you start with smaller amounts (one dropper per day) until your body can adjust to the impact of higher nitric oxide production. Dose can be adjusted to individual results. Athletes and other high-demand individuals may consider increased doses.

Q: Kyäni has two Nitro products, NitroFX and NitroXtreme. How do I determine which one is right for me?

A: NitroFX for regular daily use, NitroXtreme for demanding days. Try them both. NitroFX has a milder flavor and has the benefits of Nitric Oxide production. NitroXtreme has a quicker result with a longer duration of Nitric Oxide production. The taste is bolder. Also, there are additional ingredients that increase Nitric Oxide production and improve the body's ability to use the Nitric Oxide. We find those who have demanding lives or circumstances will more fully benefit from using NitroXtreme. These would include athletes, business professionals, students, professionals, etc.

Q: What are the quality controls used in producing Kyäni products?

A: All Kyäni products are produced under GMP (Good Manufacturing Practices) guidelines. In addition, a strict requirement of quality of ingredients and production methods has been established by our Medical Board and production experts. All ingredients are tested by the suppliers who provide us documentation of the reports with each shipment. Upon receiving the raw ingredients at the production facility, we test the product again. Once manufactured our products also go through an additional series of tests to make sure they meet our demanding specifications. This guarantees our products will always maintain the high standards we require.
